

M57 Jean Case – Executive Report

Date: 2025-07-27

Investigator: Mohamed Basil (MindSec)

Tool: Autopsy (Linux version)

Summary

The investigation focused on suspected insider threat activity involving unauthorized USB usage and data exfiltration. Key evidence shows confidential files were accessed and deleted shortly after a SanDisk USB was connected to the system. The browsing activity suggested intentional cover-up attempts.

Key Findings

- Deleted confidential files recovered
- USB connection with suspicious timing
- Web access to file transfer platforms
- Timeline correlation confirmed unauthorized activity

Recommendations

- Enforce DLP policies for USB control
- Conduct employee awareness training
- Implement alerting for suspicious USB behavior
